## A unique travel through photography

My photos, these "little illustrations of the moment" as I prefer to call them, are never a faithful representation of reality, but my own unique way of searching for the truth concealed in reality [itself].

I've been taking and editing photos for several years - almost exclusively - using my mobile phone. And all this time. I've been listening – and certainly not in my mind - to the words of the photographer Julius Shulman " The camera is the least important element in photography ".

So I keep searching for "images", always keeping in mind that the coincidences occurring in our lives, which do not find us by chance, but are constantly sought for by us, they open our horizons and provide us with great strength and hope against the difficult times.

Kostas Pittas

An architect who likes making images
